EXPERT PROFILES

Felix Domke

Report author

Felix Domke is a software developer for embedded devices. The focus of his work lies in the area of safety and reliability analyses.

He studied electrical engineering at the Lübeck University of Applied Sciences. Domke now draws on 20 years of experience in the field of software development. He has also been working as an independent software expert for the past 15 years. Specifically, Domke has been working on the independent analysis of emission-related functions in electronic diesel control units.

His presentation at the 32nd Chaos Communications Congress entitled "The exhaust emissions scandal ("Dieselgate")" generated considerable attention. He has also worked as an expert for the German Federal Motor Transport Authority (KBA) on the analysis of software implementation in relation to illegal defeat devices and as part of the parliamentary inquiry committee into vehicle emissions in 2017.
